

LONGHI

DELFI

X 671 Giuseppe Viganò

The front part of the chair frame is made of solid ash wood stained mink or licorice, and fully upholstered in leather from the sample collection on the remaining parts. Due to the specific construction technique, the frame cannot be upholstered in fabric. The seat cushion is made of dual-density polyurethane foam covered with polyester fiber, while the backrest cushion is made of curved plywood covered with medium-density polyurethane foam, and is attached to the frame using a dedicated fastening system. Due to the particular craftsmanship, the upholstery is not removable.
