

LONGHI

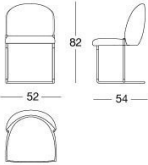

KIRA

U 180 Giuseppe Viganò

The load bearing structure is in tubular metal curved with variable radii, with a chrome finish in the following: Shaded copper, Bright shaded brown, Black Rose gold, bright light gold, Champagne gold, bright chrome, bright black chrome, matt satined bronze. The metal legs are partially covered in "Renova", a particular type of recycled leather that is sustainable and anti-bacterial. This material matches or contrasts with the colour of the main upholstery. The seat is made of metal immersed in polyurethane foam injected into a mould. The leather or fabric upholstery is completely glued to the structure, and therefore NOT removable.
