

LONGHI

ROYAL

W 851 Matteo Nunziati

The bed frame is made of wood covered with polyurethane foam of varying densities. The headboard is attached to the bed frame with sturdy painted iron plates, the same ones that allow the assembly of the structure and the adjustment of the slatted base and mattress to different heights. The bed frame can accommodate: - A fixed flat slatted base. - A storage slatted base, featuring two mechanisms to lay the mattress flat, is made of silk-effect laminated wood. Due to the special construction, fabric and leather coverings are not removable.
