The base of the chair is made of ash wood, stained in the Visone and Liquirizia finishes, while the backrest is composed of two parts: a rigid shell and a flexible polyurethane backrest. The rigid shell consists of a rigid polyurethane structure covered in leather, fabric, or finished in a glossy lacquer in the colors from the sample range. It is anchored to the base by a steel plate which, by flexing, helps achieve the right level of comfort depending on the user's weight. The flexible polyurethane backrest, on the other hand, is molded with a metal insert and functions as a soft cushion. The seat cushion is made of two-layer density expanded polyurethane. The seat and back cushions are covered with soft resin-coated fiber with an initial white lining and are completely removable.
